(54) Title: AUTOMATIC MOUNTING SYSTEM

(57) Abstract: The invention relates to a method and a device for positioning a flexible printing plate on a carrier, comprising the following steps of: placing on a table the flexible printing plate for positioning; determining the position of the printing plate by means of a visual display device; and depending on the position, moving the printing plate to its end position on the carrier, wherein the position of the carrier is sensed in the vicinity of the final position and the carrier is moved to its end position depending on the position sensed in the vicinity of the final position. The positioning takes place much more accurately as a result of these measures.
